MOBILE

React Native (CLI) · React Native (Expo) · iOS

BACKEND & DATA

Firebase · Realtime DB · Cloud Storage · Cloud Functions · FCM · SQLite · MongoDB · API Integration · JSON

TOOLS & DESIGN

Android Studio · VS Code · GitHub · Bitbucket · Material Design · UI/UX · XML · HTML · CSS · .NET

OBJECTIVE

Dedicated React Native Developer with 3 years of hands-on experience building performant, scalable cross-platform applications for iOS and Android. Skilled in end-to-end mobile delivery — from client consultation and UI/UX design through Firebase integration, API development, and app store deployment. Seeking a challenging full-time role to contribute technical expertise and grow within a forward-thinking product team.

EDUCATION

Master of Computer Application (MCA)

March 2024

PROJECTS

Caryanams — Developer

React Native

A comprehensive automotive marketplace featuring real-time vehicle auctions, verified dealer listings, and AI-assisted vehicle evaluation. Buyers can browse certified inventory, place competitive live auction bids, and connect with trusted dealers; sellers receive instant, data-driven valuations — making the entire car buying and selling process transparent and efficient.

Client consultation · UI/UX design · API & Firebase integration · live auction module · App Store & Play Store deployment

iOS App Android App

GarageOS

Developer

React Native

A digital workshop management platform designed for garages and automotive service centers. Enables service appointment booking, digital job card creation, real-time vehicle status tracking, technician task assignment, and automated invoicing — transforming paper-based service workflows into a streamlined, trackable digital operation for both customers and garage staff.

Client interaction · application architecture · multi-role user system · API & Firebase integration · App Store & Play Store deployment

iOS App Android App

Farmer App

Developer

React Native

An agricultural companion app empowering farmers with real-time hyperlocal weather monitoring, GPS-based farm boundary mapping, and interactive field marking tools. Helps farmers visualise their land, track field activities, and make data-driven decisions around planting, irrigation, and resource allocation — improving yield through accessible, on-device farm intelligence.

Client consultation · GPS map integration · weather API integration · Firebase integration · field boundary feature development · Play Store deployment

Android App

GoColors

Developer

React Native

E-commerce application specialising in women's bottomwear, built for a growing retail brand. Led a four-person development team from initial

design through production launch, delivering a full shopping experience with product browsing, cart management, and order tracking.

UI/UX design · API integration · project coordination · App Store & Play Store deployment

iOS App Android App

Simbahan

Developer

React Native · Philippines

A dedicated church community app built specifically for the Philippines, enabling Catholic congregations to stay connected with their parish. Features mass schedules, event announcements, prayer guides, live-stream access, and community bulletin boards — bringing the Filipino faith community closer together through a tailored digital experience.

Client consultation · UI/UX design · API & Firebase integration · community features development · Play Store deployment

Android App

DataAnant

Developer

React Native

A marketing application with real-time data features, enabling businesses to present live analytics and product information dynamically to their target audience.

Client consultation · project design · API & Firebase integration · Play Store publishing
